Smart Resume Analysis System Tool

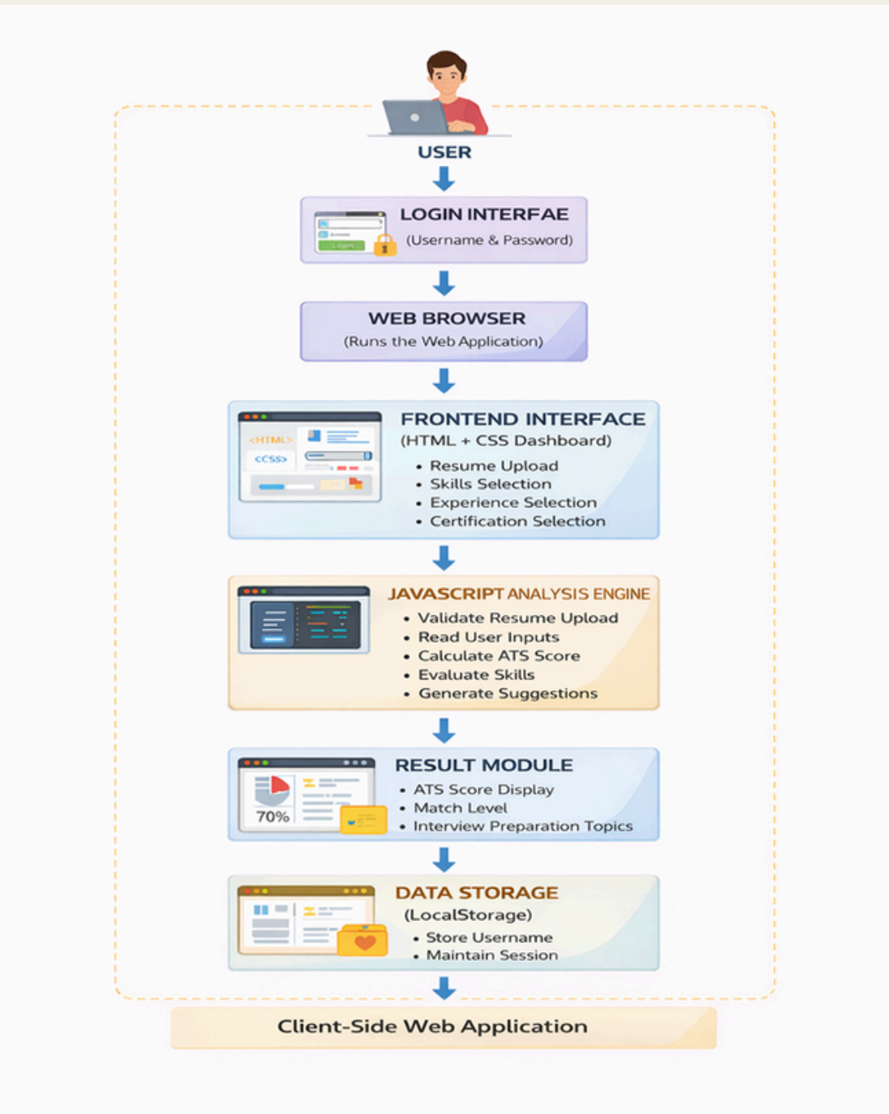
PROJECT BASED LEARNING FROM FWD

(DEEMED TO BE UNIVERSITY)
BACHUPALLY CAMPUS

ABSTRACT

The Smart Resume Analysis System Tool is a Java-based application that helps recruiters and job seekers analyze resumes efficiently. The system evaluates resumes based on factors such as education, work experience, skills, and certifications, assigning weights to determine their relevance for a job role. It then generates an overall score, highlights strengths, and suggests areas for improvement. This tool automates the resume screening process, saving time and providing a faster and more objective approach to recruitment.

SYSTEM ARCHITECTURE



FUTURE SCOPE

- Implement AI-based resume analysis for more accurate evaluation.
- Add automatic job recommendations based on user skills and profile.
- Integrate with real-time job portals and company ATS systems.
- Provide personalized resume templates for users.
- Add advanced interview preparation modules and career guidance features.

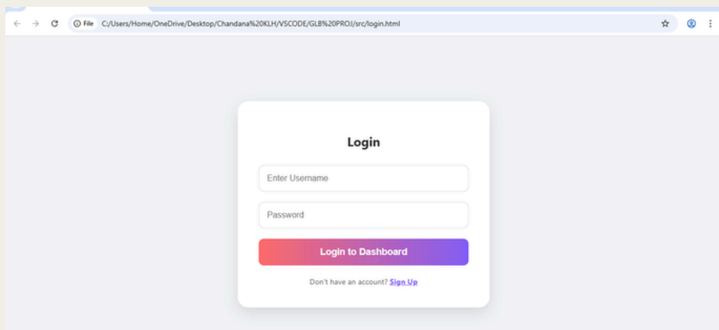
Cluster : 2

CO-WISE IMPLEMENTATION

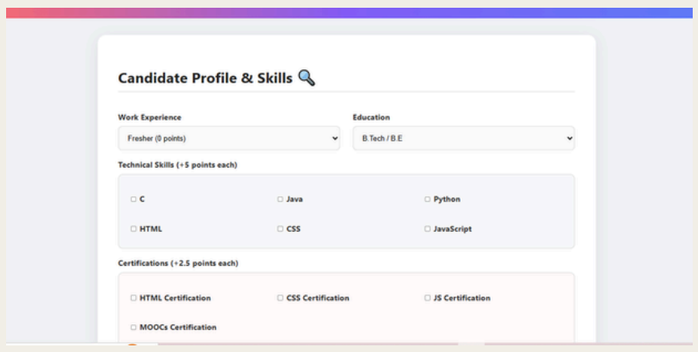
CO1 – Internet Fundamentals, HTML & CSS

- Developed web pages using HTML document structure and semantic elements.
- implemented headers, forms, buttons, labels, and layout containers.
- Applied CSS styling, gradients, grid layout, and responsive design for a clean dashboard interface.



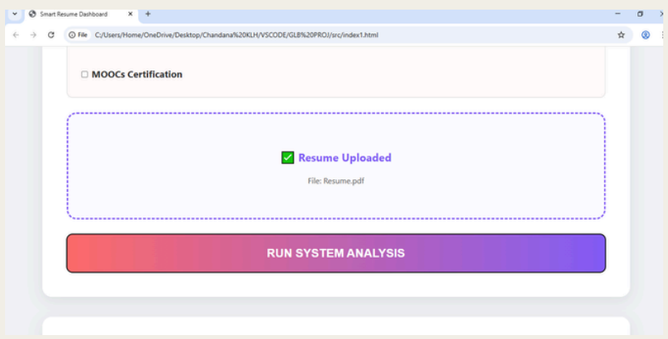
CO2 – HTML Forms & Input Handling

- Designed user input forms for work experience, education, skills, and certifications.
- Implemented checkbox selection for technical skills and certifications.
- Added resume upload feature using a file input control.



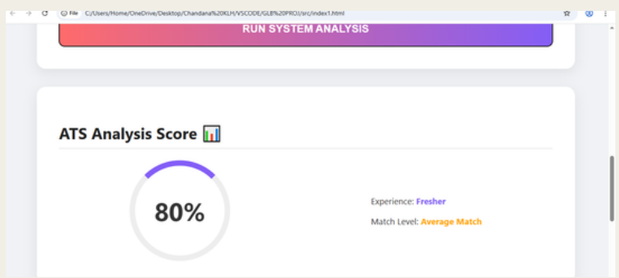
CO3 – JavaScript Programming

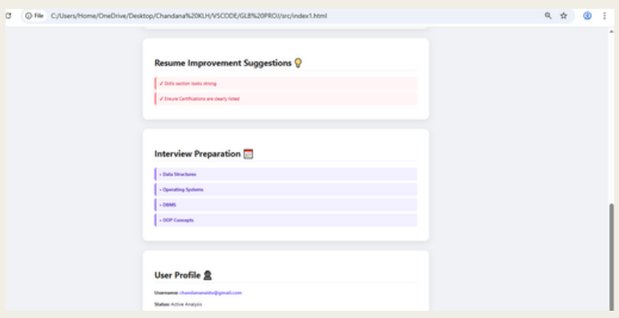
- Implemented JavaScript functions, variables and conditions
- Used arrays and objects to manage skills and certifications
- Developed ATS score calculation logic for resume evaluation
- Applied loops and expressions for processing user inputs



CO4 – JavaScript DOM & Interactivity

- Used DOM manipulation to update ATS score and results
- Implemented event handling for button clicks and form actions
- Used LocalStorage for login session management
- Displayed dynamic analysis results with score animation



CO5 – Web Application Integration


- Integrated HTML, CSS and JavaScript for complete web application
- Implemented resume analysis dashboard for users
- Provided skill match evaluation and improvement suggestions
- Developed a simple and interactive resume analysis system
